

Timestamp	Email address	When you joined this course, you could've changed the course after a week. What made you stay on-board?	How do you compare this course with other courses you have taken so far?	How do you find our Course Instructor Prof. PK Jain? What was his role throughout your journey in this course?
11-4-2024 12:24:11	animeshsharma@iitdmj.ac.in	The style of teaching. I could have been in any other class but it would be the same as being in any other class. But this class is different. We get to participate .	All text and no work makes jack a dull boy . This course gave me the opportunity to work.	He made me discover things and encouraged me to try more things no matter how lazy I have been.
11-7-2024 11:08:14	pakalapati@iitdmj.ac.in	The way P.K.Jain sir demonstrated about the course in first week.	I can't compare because every course has its own way of learning and coming to this course it was awesome	Sir has done a great job helping us throughout the course
11-7-2024 14:01:30	tamaranakarthik@iitdmj.ac.in	Course was interesting and the way of teaching by pk jain sir was good		
11-7-2024 18:41:41	tadisaisrikanth@iitdmj.ac.in	Sir, as I said I was left with only 1 course to make over . CAGD is my only opting subject left.. The reason behind me staying in this course only is that I've already done NC- CNC MACHINING TOOLS under PK JAIN sir in my 3-1 semester and I know how the classroom interaction essence will be there under PK JAIN sir.	Sir, here I would like to share with you my personal opinion. Sir,the biggest flaws in our Indian educational system is that students were not upto the mark in implementing the stuff which they have learned in classroom teachings. they lack in this completely. Unfortunately this thing happens with our institution too with many of our courses. As being in this institution for the past 4 years , I've found this course to be unique among other courses just because you took all measures in making students get the grip on how to correlate with the classroom teachings and implement them practically. U made this possible by taking those extra programming sessions to us. This is a great move which I didn't seen in any other faculty in these 4 years in our institution sir. Thank you so much for this great move .	Sir, as said above this is my second course under you . I've already done my NC CNC MACHINING TOOLS under you sir. In both these courses the thing which I didn't find any change is the way you keep the classroom atmosphere so lively. The way you keep students engaged with your cool and calm interactions is something which I haven't seen in any other faculty till date. Sir, this is what matters at the end of the day because till how much level students got engaged in the classroom interactions is truly based on the way the course instructor be with the students. To that matter, personally saying sir, you are the best. Thank you so much sir for keeping our classroom atmosphere so lively with your cool, calm and smiling composure.
11-7-2024 23:38:05	pawar.shreyas@iitdmj.ac.in	My interest	This course demands time to be spent on it.If you don't,you will stay behind.	He is a cool teacher.I got to know how to teach students, so that they don't get bored.Got to know many new things.
11-7-2024 23:58:44	sourabhchasta@iitdmj.ac.in	Interest drives me into deep	Better , at least i can see what am i doing, Beizer curve is not a imaginary curve for me , i can plot it	Journey can be easier if tutor is supportable, i found CAGD in same way.
11-8-2024 0:42:14	arjun.jadoun@iitdmj.ac.in	faculty's involvement was good & the challenges to face was fascinating for me (as told by Prof PK Jain sir in the class)	All are good at their own place, but faculty involvement and the teaching methodology was quite different this time.	"Maintaining the Balance" between things we do, I learnt from him. In this course, I got to know, what the involvement of faculty can do. Providing a lot of extra time (no scheduled class) was very helpful for us in all aspect. Teaching methodology is all different and excellent at the same time. _/_.
11-8-2024 1:08:28	1713103@iitdmj.ac.in		Linear Algebra + More Time consuming (students should improve time management skills ,other subject is also mandatory to Pass)+ Programming is challenge and improvement in Logical thinking.	Very Energetic, His energy,expectations,positive thoughts forced me to expand my effort limits.
11-8-2024 2:15:40	fakirpatra@iitdmj.ac.in	it was bit difficult to catch-up with the boring maths and geometry but as i said i wanted to know the play going on in the back-ground, that kept the fire burning inside me.	very much helpful from learning prospective , i feel bit nearer to my dream to be CAD engineer with this course	sir, was really hard working through out the semester and he used to ask us to arrange time for extra classes, sir helped us in clearing our basics , but due to lack of time he has to gear up at times.
11-8-2024 9:16:05	1613106@iitdmj.ac.in			
11-8-2024 19:17:33	1713107@iitdmj.ac.in	Didn't even thought of that.	This course would havebeen very interesting ,if i had any programming skills earlier.	Definitely sir has always tried to relate the topics with practical day to day life examples,which I personally likes most,and the freindly nature of sir. I must add Snacks and tea also.☺
11-8-2024 23:26:49	aditya.dhawan@iitdmj.ac.in	i find this course interesting than other courses	i find this course interesting than other courses, atleast i am not bored after every class infact eager to know the reason behind what i have studied	He was very keen and generous in explaining the course content and removing all the doubts arised in our minds.
11-8-2024 23:58:19	1713111@iitdmj.ac.in			
11-9-2024 0:03:33	1713105@iitdmj.ac.in		in this subject , learning process is totally different .if u know concept genuinely then this subject is easy for you	
11-9-2024 0:58:17	akshayvijay@iitdmj.ac.in	previously I choose cad and cfd ,both am't suggested by seniors ,both these were looking difficult ,so i decided to drop one of these, there was two things that made me to stuck with cad 1. It was my extreme interest in the course cad that is going to be the base of morden world. 2. first class i didn't get so much ,but the way sir was teaching, I became sure that I would learn more new thing.	I forget that I had learnt C language before ,and this is the course the meet me again with code.	I have seen most of the professor only mind their own business,but my point of view towards professors was changed when I meet with Prof.Pk Jain sir .He always set the whole class environment according to student's will(Clearifying doubts,Try to relate difficult concept with genral life situation, Arranging extra class if we are not feeling good with topic on a optimized timing). And he is the only professor whom contact is in my whatsapp.And it was very convenient way of communication throughout the whole course journey.
11-9-2024 11:15:54	arpitg@iitdmj.ac.in		Only course where I never felt like missing classes.	
11-9-2024 11:18:14	akshatpal@iitdmj.ac.in	The first few classes were very interesting, and also I was developing some coding skills which made me stay in this course	I had 6 courses in this semester, from which CAGD was the most interesting one. I have devoted maximum time of my semester for this course.	
11-9-2024 16:41:32	ayushnamdeo@iitdmj.ac.in	interest came after joining this course so that's made me to stay	good , had great experiences	PK Jain sir is very good teacher , he helps at every stage of problem and he always make interaction with the student , which is most important thing on them
11-9-2024 17:00:18	1713110@iitdmj.ac.in		Due to this course I am able to learn Matlab	To learn new not this course only but beyond this
11-9-2024 17:01:10	1713309@iitdmj.ac.in	Bcause it was interesting	programming skills	Best faculty
11-9-2024 17:01:24	1713302@iitdmj.ac.in	With hope to learn better	Different	He is good instructor , he tries his best to explain the concept. I find regeneration of my calibre to do programming.
11-9-2024 17:08:34	1713106@iitdmj.ac.in	-----	due to large portion of MATLAB coading we given much more time as compare to other subject.	sir has very supportive nature. they clear my confusion about my project.
11-9-2024 17:18:13	ajay.kumar@iitdmj.ac.in	I joined this course in the beginning of semester-I 2024, since it was compulsory for me and i was also intrested in this knowing the transformation which is involved in different modeling part.	Till now it was one of the good course which i have taken.	I find you quite motivating and inspiring, and your way of teaching which is totally apart from other faculties.

Timestamp	Email address	When you joined this course, you could've changed the course after a week. What made you stay on-board?	How do you compare this course with other courses you have taken so far?	How do you find our Course Instructor Prof. PK Jain? What was his role throughout your journey in this course?
11-9-2024 17:28:03	1713108@iiitdmj.ac.in			
11-9-2024 18:15:17	1713311@iiitdmj.ac.in	as decision was made by me so haven't thought about this	Quite interesting	
11-9-2024 19:23:19	yashsoni@iiitdmj.ac.in	To challenge myself and push through my limits	More practical based knowledge	Good and motivating
11-9-2024 19:25:24	1713102@iiitdmj.ac.in		This is most interesting subject	
11-9-2024 22:07:03	ishanbanerjee@iiitdmj.ac.in	In the initial phase, every student judges the way of teaching of his instructor as far as an elective is considered. What made me stay was the habit of PK Jain Sir of involving the students into mind-storming sessions in between the lectures. And I love to use my brain from time to time.	The Best so Far.... Will miss this class	I don't know where to start. The way of teaching, interaction with the batch, developing our interest in what is being taught, explaining the real applications of the course, and regular Leg-Pulling & Witty Answers to students.... All this made this journey stress-free.
11-9-2024 22:45:18	vishalagrawal@iiitdmj.ac.in	During introduction of course it felt challenging, it seemed we have to do a lot of hardwork. But, a sword needs to be sharpened before cutting. It has to go through many processes. The interest and motivation to work kept me on-board.	A different one. Different studying approach, very interactive one.	He was not just a teacher a better guide too. He showed us a path to approach towards the subject, a different way of teaching where you get to apply your own mind rather than just listening during classes.
11-9-2024 23:13:37	anubhutigupta@iiitdmj.ac.in	I understood that there is a lot to learn and I'll be able to do some practical work too.	More practical knowledge, confident about my skills, I know exactly what I know and what I don't. But it consumed a lot of time	He appreciates efforts which is motivating.

Timestamp	Email address	What did you like the most in this course?	Would you recommend this course to your juniors? Give reason for your answer.	Please feel free to give some suggestions for the Next Batch
11-4-2024 12:24:11	animeshsharma@iitdmj.ac.in	Quizzes	Yes. They will have a course in which they won't spend time trying to mug up information about things that they don't see around them	Regular assignments on various commands of matlab.
11-7-2024 11:08:14	pakalapati@iitdmj.ac.in	real life application relating to the concept	yes,There if any one interested in this field I definitely suggest this course	
11-7-2024 14:01:30	tamaranakarthik@iitdmj.ac.in	Teaching of pk Jain sir	I will recommend my juniors if they are interested.	
11-7-2024 18:41:41	tadisaisrikanth@iitdmj.ac.in	The way classroom atmosphere be and the way PK JAIN sir used to make students engaged with his interactions.	I will recommend it for sure because it is one subject in our institution where we can learn how to implement the classroom teachings practically that to simultaneously.	Sir my one and only one suggestion is .. Sir sharing my personal experience, after taking this course and participating in the programming tests, I found coding or programming to be more interesting. It actually brought a feeling like to learn more about programming in me. But it is too late for me because as it will not be useful to me in my career progress as I said you that will be going to civil services. So sir, like me there might be students who are not that familiar with MATLAB or programming but they are interested enough to learn more. they might know some basics but they were not that strong enough in their basics. So I recommend you to take some special classes for the students who wants to learn MATLAB from the scratch. Sir, if you can't permit your time for taking those extra programming classes for beginners due to your busy time schedule, you can assign some PG students to take those classes and teach the beginners. This sessions can be held during weekends. Sir education is the greatest tool which one can have .This is what I believe. Sir, personally saying,we can say education is on flying colors not when the brightest student gets even more brighter but we can say it when the poor student gets to the top notch and shine the same way like a bright student. You are the only Professor in our institution who keeps education simple and easy for students with your interactive sessions. Let us join hands to make people more literate. I believe in you sir, that you will send more students out of this institution with flying colors.Thank you so much sir for giving this opportunity to share my views and expressions without any hesitation. I hope I was not wrong in the way I spoke throughout this feed back. I gave my honest feed back sir. Once again thank you so much PK JAIN sir. JAI HIND
11-7-2024 23:38:05	pawar.shreyas@iitdmj.ac.in	Tea break and programming lab	Yeah definitely ! This course is different from other courses and get to know many new things	Conduct a matlab workshop so that they get to know about matlab first
11-7-2024 23:58:44	sourabhchasta@iitdmj.ac.in	Programming and working on new language	If they can Code or enthusiast to learn code	Can we try to extend in One month more December to complete a good level project
11-8-2024 0:42:14	arjun.jadoun@iitdmj.ac.in	All good, nothing particularly	Yes!! of course	
11-8-2024 1:08:28	1713103@iitdmj.ac.in	PPT slides are of well arranged contents and figures.	Yes,If they have Knowledge of matlab,There will be two path of gain,firstly rich theory and secondly practical visualisation of it in Matlab.	Please upload ppt slides before classes,this will help to understand subject fast.
11-8-2024 2:15:40	fakirpatra@iitdmj.ac.in	MATLAB coding implementation	of course, if they want to pursue CAD as a part of their career this course will make them realize, their dream as at the end of this course ,you can code a all new software means you can join big companies as software-developer	sir, if possible divide this course in ti 2 parts for 2 consecutive semesters and for every problem MATLAB implementation should be done
11-8-2024 9:16:05	1613106@iitdmj.ac.in	Transformation, bezier curve, B-Spline curve	Yes because CAGD useful is everywhere	
11-8-2024 19:17:33	1713107@iitdmj.ac.in	The way sir takes online test 😊	Yes definitely ,but who really loves programming.	What I am personally facing, definitely I will not let my juniors to face.It would be a great idea if we have some programming workshop before/during this course. Hope you will take it positively sir, as I have tried to express what I and my batchmates have literally faced and told the truth.😊
11-8-2024 23:26:49	aditya.dhawan@iitdmj.ac.in	relating the theory with the programming part, atleast I can see what I have studied through programming	yes , ofcourse atleast they must know the basics of what they are doing in their CAD softwares or the use of coding in Mechanical Engineering	More number of questions should be solved in the class,typical things should be taught with slow pace.
11-8-2024 23:58:19	1713111@iitdmj.ac.in	Challenges	Yes.....if they knew coding	
11-9-2024 0:03:33	1713105@iitdmj.ac.in	programming	If they are from cad-cam stream ,it must be compulsory.For other stream as per their interest	need more time to cover lots of thing. or conduct MATLAB workshop.
11-9-2024 0:58:17	akshayvijay@iitdmj.ac.in	Bicubic Surfaces	I would,but the decision is on their interest.	Me and most of my colleague have faced a problem of interconnection of solid work ,catia,autocad with matlab .What extension is stand for what .In what application we use what extension.There should be one lecturer on these kinda things.
11-9-2024 11:15:54	arpitg@iitdmj.ac.in	Learning concepts based on logic was fun.	Maybe...Depends on who is asking	This course is not about studying a day before exam. It requires your time and effort. If you are preparing for some other competitions instead of focusing on your placement. You should go for something easy.
11-9-2024 11:18:14	akshatpal@iitdmj.ac.in	Apart from the bookish knowledge, I learned how to apply that knowledge into MATLAB programs which helped my understanding.	This course is definitely great, but requires utmost attention and continuous hard work from an individual. If you think you can do it, then this course is definitely for you.	This course is not like mugging things up at last minute and passing exams. It requires continuous hard work from ones side.
11-9-2024 16:41:32	ayushnamdeo@iitdmj.ac.in	the programming classes	yes , why not . From my all previous answers it is cleared that I like this course , with the reasons. so made my point!	there should be some scheduled lab classes for this course , so student can do less effort on just for the things that are the part of programming , and they can focus more on learning the content of this course within the time and complete all the portion.
11-9-2024 17:00:18	1713110@iitdmj.ac.in	Working with Matlab	MATLAB like software is required for everyone to visualise your problem so if anyone want to play with Matlab this subject is very essential	
11-9-2024 17:01:10	1713309@iitdmj.ac.in	programming and numericals	yes it is helpful in their placement	
11-9-2024 17:01:24	1713302@iitdmj.ac.in	Programming.	Yes I will if he/she has some interest in CAGD, since then only he/she get some fruit full results.	Programming classes should be done with proper guidance and basic commands can be thought.
11-9-2024 17:08:34	1713106@iitdmj.ac.in	classes are very interactive.	yes, if they knows the littlebit knowledge about MATLAB coding.	I am from Mtech CAD-CAM but I didn't know anything about MATLAB before ,if possible then arrange a MATLAB workshop so we understood much more .
11-9-2024 17:18:13	ajay.kumar@iitdmj.ac.in	Transformation topic and CSG model which involves boolean operation .	Yes i will recommend this course to my juniors because it involves visualising engineering things.	As far as this course is concern it was all good.

Timestamp	Email address	What did you like the most in this course?	Would you recommend this course to your juniors? Give reason for your answer.	Please feel free to give some suggestions for the Next Batch
11-9-2024 17:28:03	1713108@iiitdmj.ac.in	way of learning through interactive class and friendly nature of course instructor.	yes but only if they have some basic knowledge about matlab programming	teach some basic matlab coding to students who are not from coding background.
11-9-2024 18:15:17	1713311@iiitdmj.ac.in	programming quiz	ya sure. they can learn matlab at least	please arrange few more basic matlab classes so that each and every one can learn easily
11-9-2024 19:23:19	yashsoni@iiitdmj.ac.in	Its application	Yes because of its approach of not following the traditional way of teaching model i.e. pen-paper based	
11-9-2024 19:25:24	1713102@iiitdmj.ac.in	Programming in MATLAB	Yes, because this course is different from other subjects and interesting too.	Before starting the course,there should be some MATLAB classes.
11-9-2024 22:07:03	ishanbanerjee@iiitdmj.ac.in	The Quizzes and the Project. Mainly the Coding part.	Definitely! Who wouldn't?!! Thumbs Up from my side.	In every Lecture, the students can be taught about a new MATLAB command. Just to increase their 'vocabulary' in MATLAB. Telling about one Function a day will help them in the long run.
11-9-2024 22:45:18	vishalagrawal@iiitdmj.ac.in	Extra programming class to improve programming skills .	YES! Without second thoughts.Interactivity,Intensity,interest is the reason.	Project can be assigned before midsem.Project assignment was quite late.
11-9-2024 23:13:37	anubhutigupta@iiitdmj.ac.in	Implementation of the knowledge and relating to real world.	Yes, because actually gain something but if a student is not willing to work hard I won't recommend	Surfaces and solids should be given a little more time .
